## Overview

### Purpose

The purpose of this framework is to act as a common language tool and lens for stakeholders of social and health wellbeing in Guelph and Wellington to:

- understand needs, gaps, strengths;
- take strategic action; and
- measure impact.

### Approach

This framework is built on the belief that the impact of our individual efforts can be deepened if we are deliberate about working together. Centralizing our individual and organizational knowledge will deepen our collective knowledge. Deepening our collective knowledge will strength the ability of stakeholders of social and health wellbeing to take individual and collective action that is strategic; reflects local community needs; and builds on community strengths and momentum.

At the same time, we need to commit to evidence-based decision-making. Evidence includes academic and local research, best and promising practices, and the knowledge, experience and expertise of stakeholders and people with lived experience.

Finally, a commitment to work together requires a willingness to be flexible, iinnovative, learn from one another, and test and experiment new ideas and actions that have the potential to improve the collective wellbeing of the people who live in Guelph and Wellington.

### Pathways: Definitions & Outcomes

This framework supports the implementation of Toward Common Ground's (TCG) pathways. Pathways are the mechanisms that are used to affect change. TCG has identified five pathways. The first two pathways are the launching points and foundation for the other pathways.

<b>Pathways</b>	<b>Definitions</b>
Create a bird's eye view	Through common language, centralize and create a high-level view of information and data about collective social and health needs, gaps, strengths and responses in Guelph & Wellington.
Connect the dots and contextualizes	Conduct quantitative and qualitative research and engage stakeholders to deepen, distinguish and refine what we know about strengths, gaps and needs. Connect and contextualize the data and information that is gathered by situating it in local, provincial or national contexts.
Transfer and mobilize knowledge	Share information and data about social and health needs, gaps, strengths and responses in an ongoing and accessible manner as a resource for human service stakeholders to make informed and strategic decisions about how best to support and meet the needs of people who live in our community.
Build Collective Capacity	Build organizational and collective capacity as needed in, or requested by, the local human services sector
Champion and support strategic action	Champion or support new and existing initiatives to take strategic action in response to social and health needs in our community to maximize collective impact.

Through the implementation of our pathways, alongside our framework Toward Common Ground works toward the following intermediate outcomes:

### **Intermediate Outcomes**

- Expand our individual and collective knowledge about the wellbeing of people who live in our community
- Inform a consistent and comprehensive understanding of the strengths, gaps and needs of our community across priority populations and issues
- Provide clarity about how and where we intervene to affect change
- Identify mutually reinforcing efforts and opportunities for alignment, synergy and/or to break down barriers
- Identify opportunities to work together to address complex challenges
- Leverage community strengths and knowledge
- Strengthen our collective ability to affect meaningful impact on people's lives
- Guide strategic action taken by TCG and other stakeholders of social and health wellbeing in Guelph & Wellington
- Inform resource allocation
- Align resource allocation with evidence-based needs

The collective **vision** for Toward Common Ground partners is:

*Everyone in Guelph & Wellington is happy, healthy and thriving*

This vision has been identified as a collective long-term outcome, with the understanding that it may be defined and realized differently across individuals, organizations and communities.

The following long-term outcomes have been identified as critical to realizing our vision:

**Long-term Outcomes**

Barriers (including systemic barriers) to the social determinants of health have been removed

Individuals have the knowledge, capacity and agency to create the life they want for themselves

Communities are places where people feel supported, connected and like they belong

Organizations are supported to make evidence-based decisions about planning and services and to measure the impact of their efforts

Organizations have access to supports and learning opportunities that build the capabilities and skills to provide the best support and services possible for people that they serve

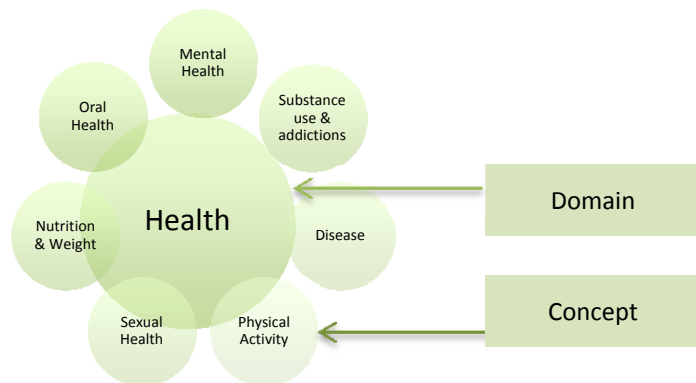

Service systems work together, are accessible, meet people's needs and leave people better off

## Wellbeing Framework Part 1: Common Language & Understanding

In order to create a bird's eye view and connect the dots across and contextualize social and health strengths, gaps and needs, wellbeing language will be aligned in two ways:

1. Agree on common language by identifying:

- Domains\*: Quality of Life Categories<sup>i</sup>
- Concepts\*: Specific aspects of quality of life under each domain area

See appendix A for definitions of key terms (marked with \*) used in this document

### Common Language and Understanding Phase I: Identifying domains, concepts & bird's eye view indicators

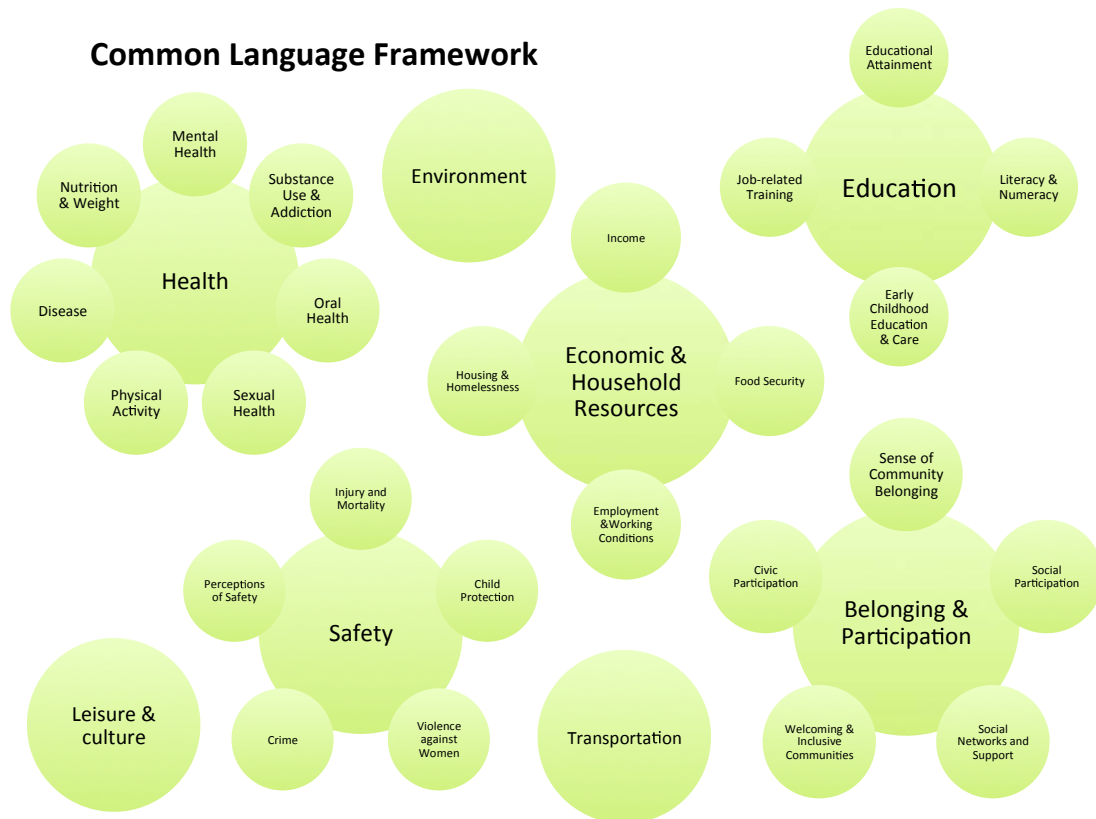

Toward Common Ground uses an adapted version of the Canadian Index of Wellbeing's definition of wellbeing:

Wellbeing is the presence of the highest possible quality of life in its full breadth of expression focused on but not necessarily exclusive to: access to economic and household resources, robust health, a sustainable environment, an educated populace, a sense of belonging and participation, a safe home and community, high level of civic participation and access to and participation in leisure and culture<sup>ii</sup>

This understanding of wellbeing was shaped by and assisted to identify the following nine domains and corresponding concepts, as the basis for our common language.

The next section outlines the domains, concepts and population-level indicators and measures that were identified as *Phase I* of developing a common language and understanding to support our bird’s eye view of social and health wellbeing in Guelph and Wellington.

Whenever possible, the choice of domains, concepts and indicators follows the precedent set by the Wellington Dufferin Guelph Reports Card on the Wellbeing of Children (RC) and it’s sub-committee, the *Core Indicators Advisory Committee* (CIAC). When the precedent of the RC and CIAC could not be followed, decisions were guided by the CIW, alongside input from our stakeholders, content experts\* and the academic literature.

## DOMAIN 1: Economic & Household Resources

**Economic & Household Resources** encompasses four social determinants of health (income, housing, food and employment) that are essential requirements for people to survive and thrive.

**Housing** refers to the places that households live, on a continuum from homelessness to home ownership. All housing should be affordable, in good repair and provide enough space for residents

**Homelessness** includes 1) *Unsheltered, or absolutely homeless and living on the streets or in places not intended for human habitation*; 2) *Emergency Sheltered*; 3) *Provisionally Accommodated*; 4) *At Risk of Homelessness*.<sup>[1]</sup>

**Food security** is when *all people at all time have access to sufficient, safe, nutritious food which meets their dietary needs and food preferences for an active and healthy lifestyle.*<sup>[4]</sup>

**Food insecurity** is a social determinant of health that is defined as *inadequate or insecure access to food because of financial constraints - or limited access.*<sup>[5]</sup>

**Income** refers to *money received through work, government sources, pension sources, investments and other regular cash income*.<sup>[2]</sup>

**Income inequality** is the extent to which income is distributed unevenly in a group of people.<sup>[3]</sup>

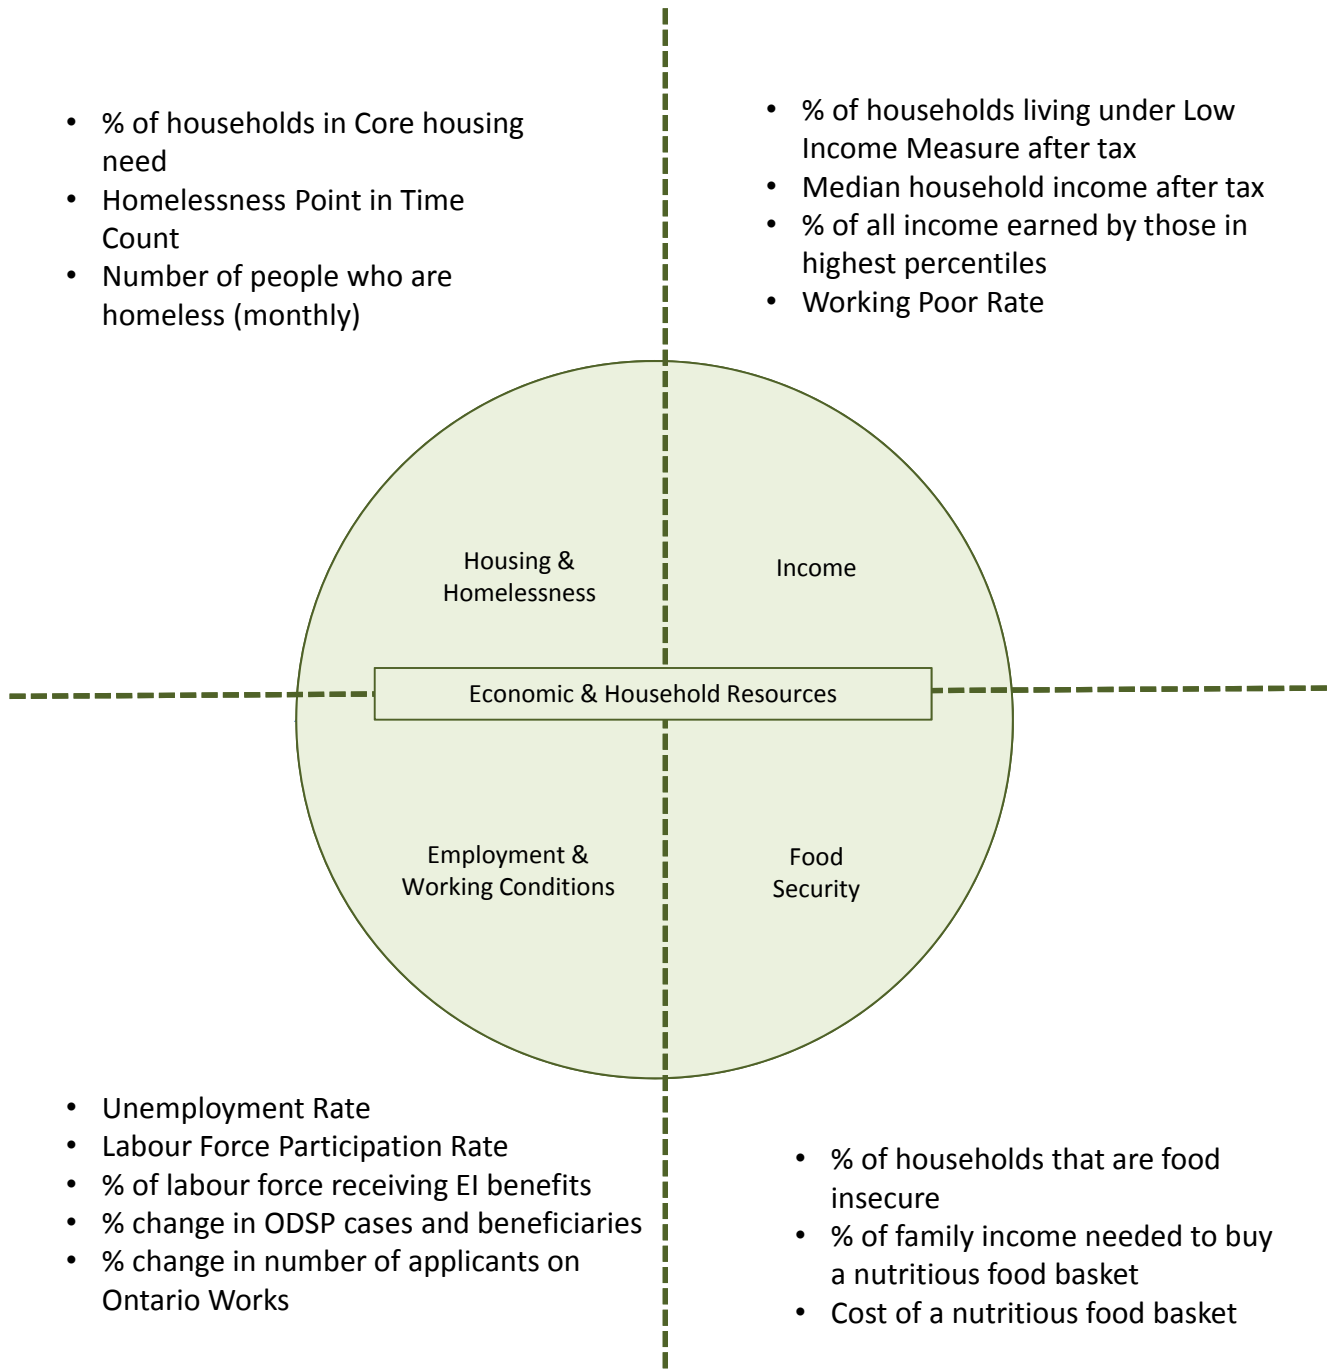

**Employed** are persons *having a job or business, whereas the unemployed are without paid work, are available for work, and are actively seeking work. Together the unemployed and the employed constitute the labour force.*<sup>[6]</sup>

**Working Conditions** include: *working time (hours of work, rest periods, and work schedules), remuneration, as well as the physical conditions and mental demands that exist in a work place.*<sup>[7]</sup>

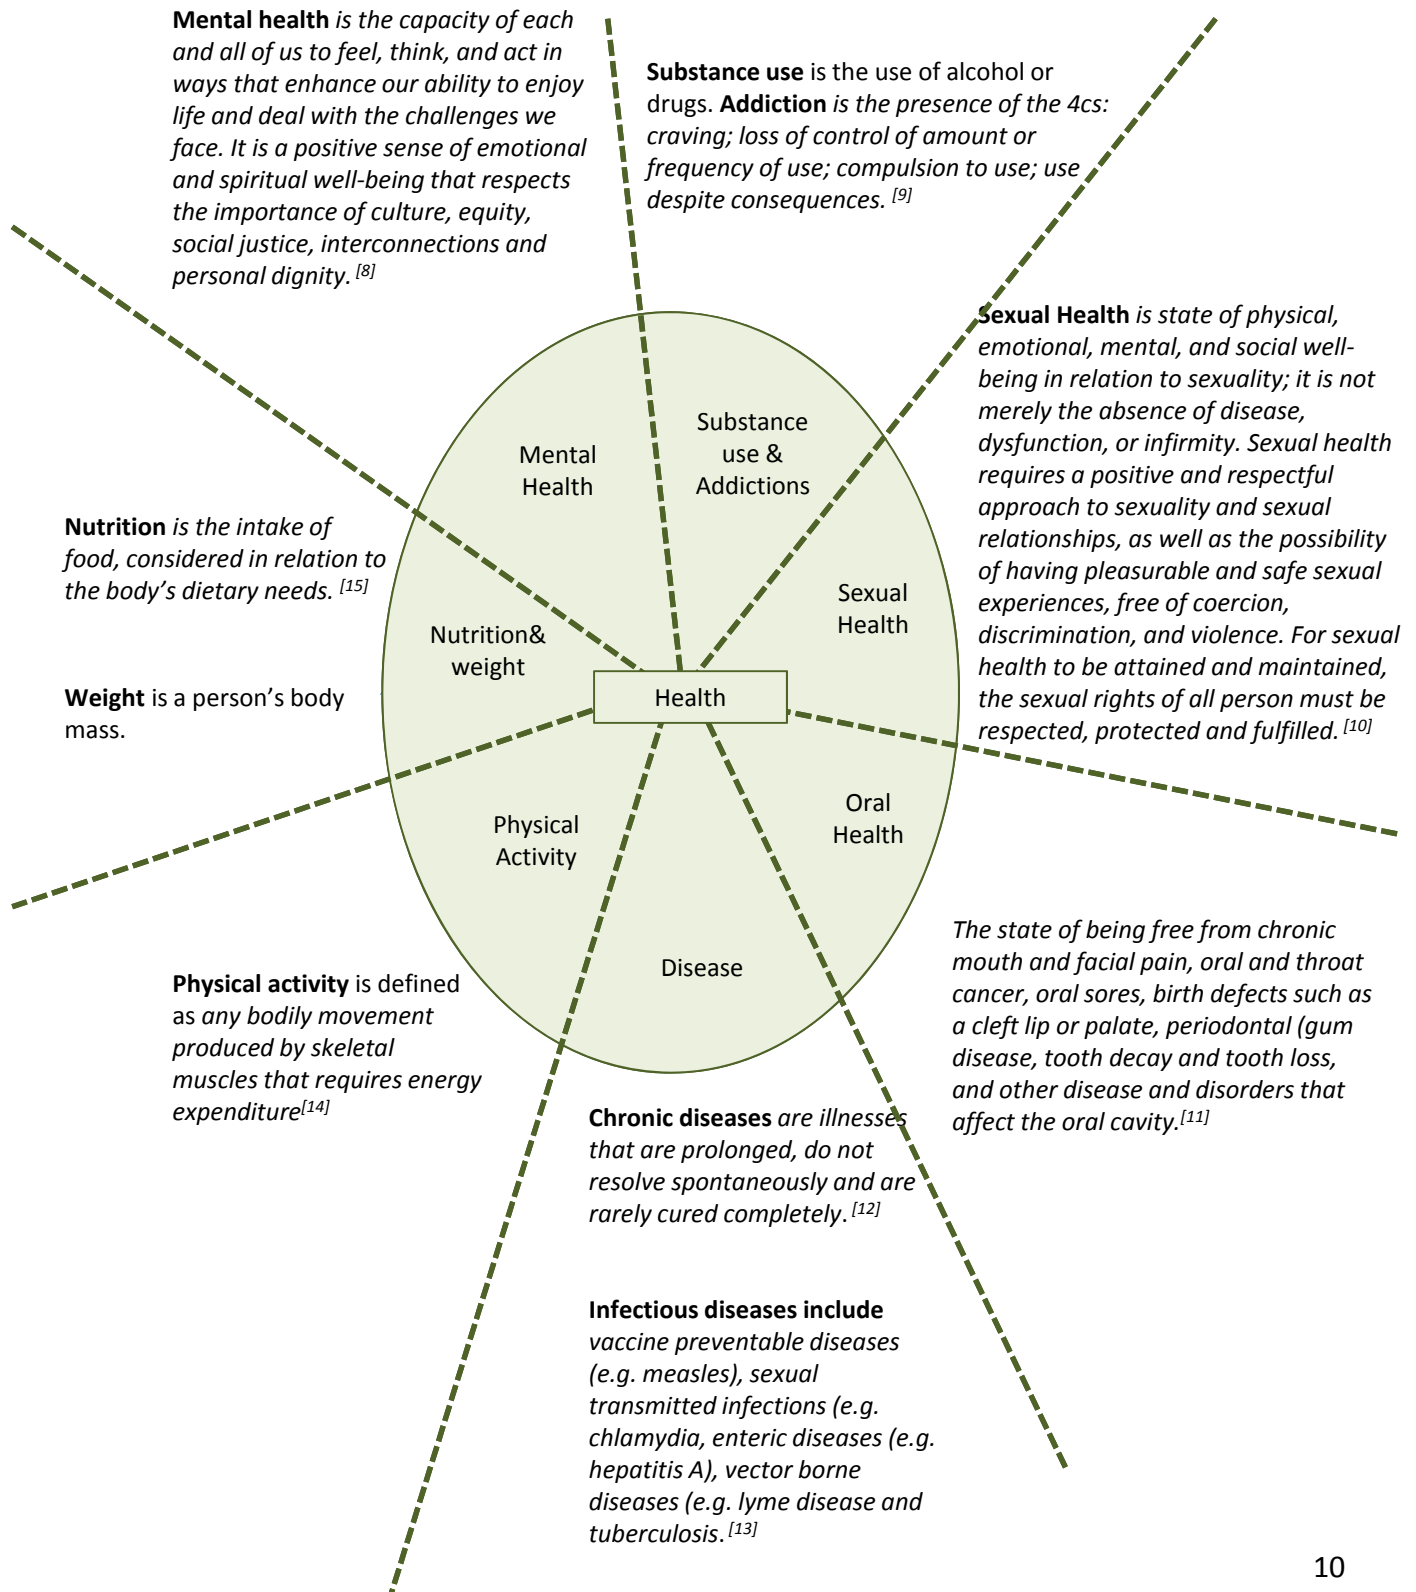

## Economic & Household Resources Population-level Indicators

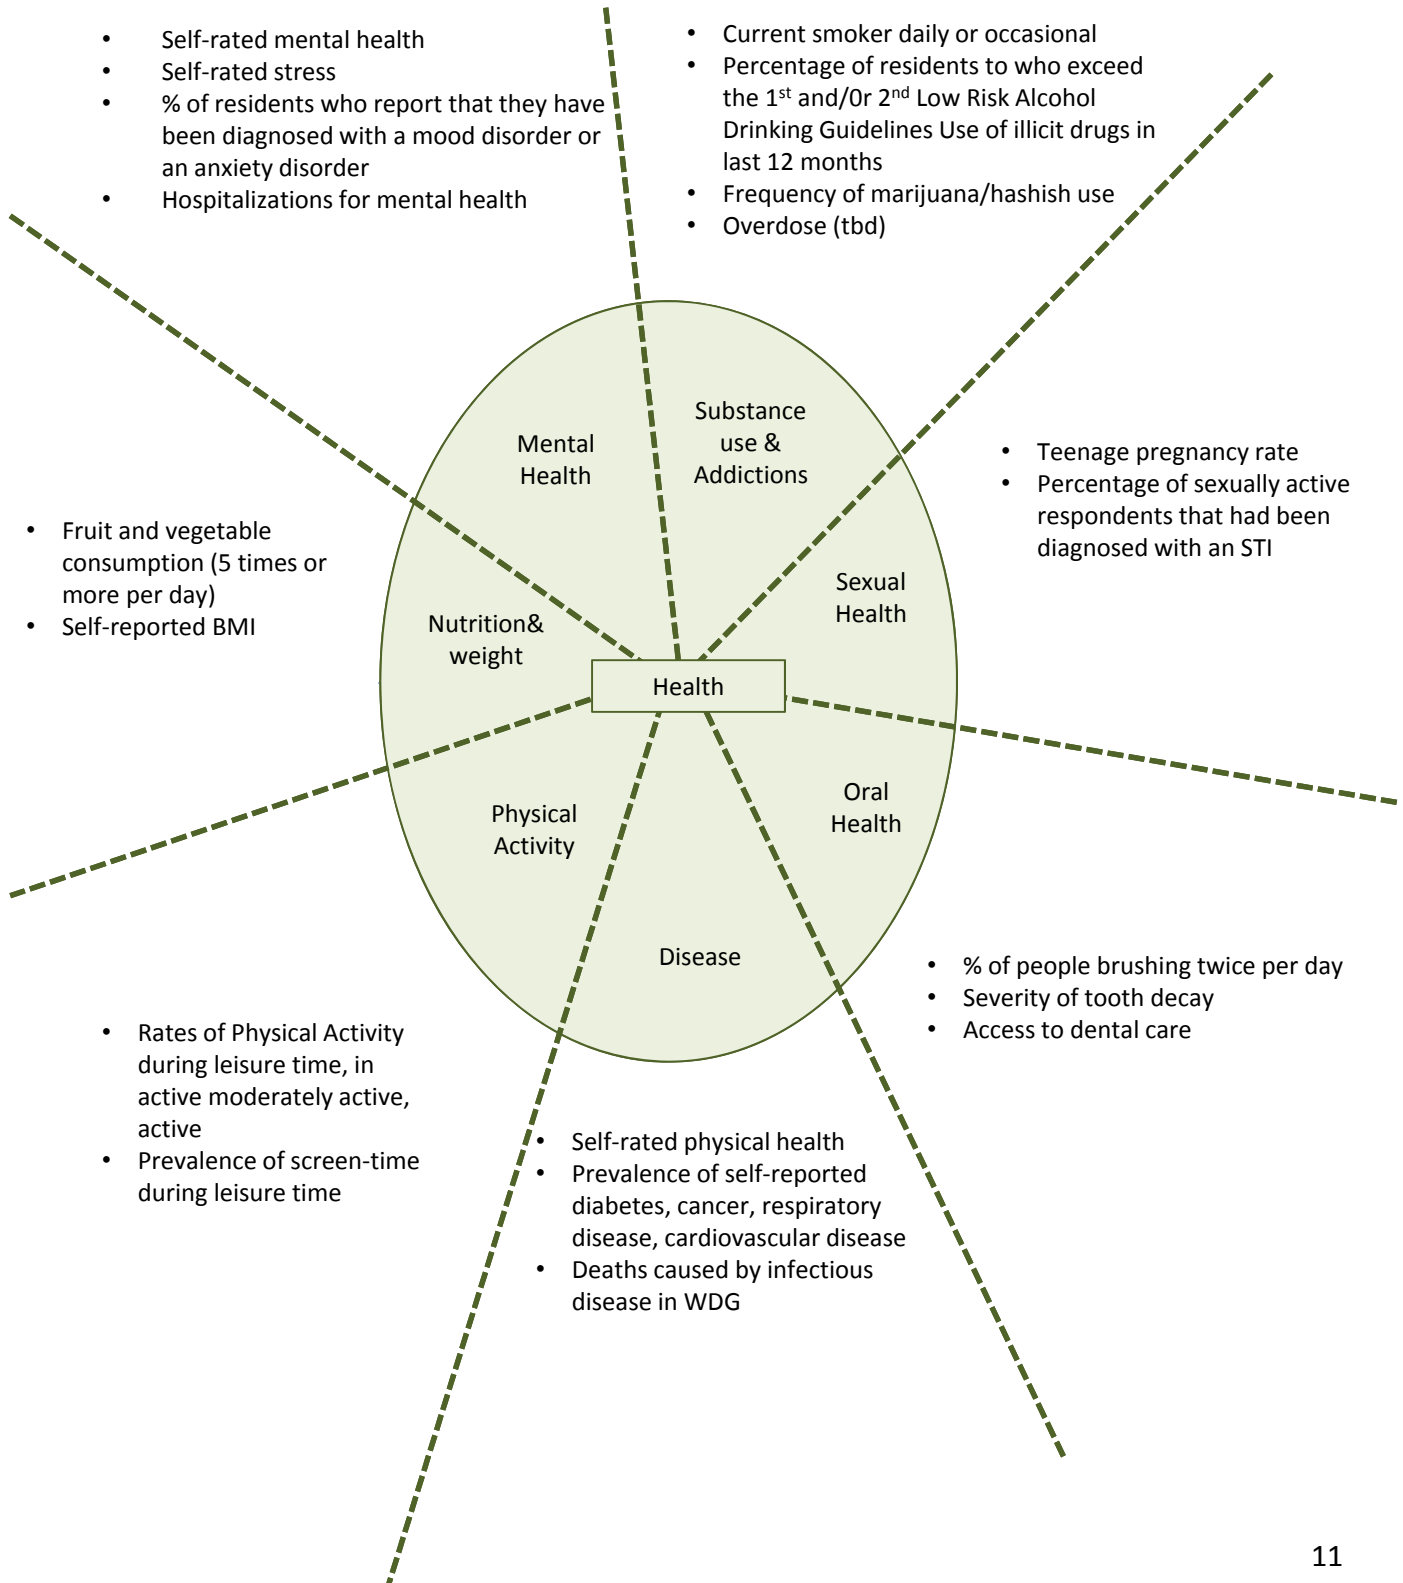

## Domain 2: Health

**Health** is holistic. The World Health Organization describes health as: *a complete state of physical, mental and social well-being, and not merely the absence of disease or infirmity.*

## Domain 2: Health

**Health** is holistic. The World Health Organization describes health as: *a complete state of physical, mental and social well-being, and not merely the absence of disease or infirmity.*

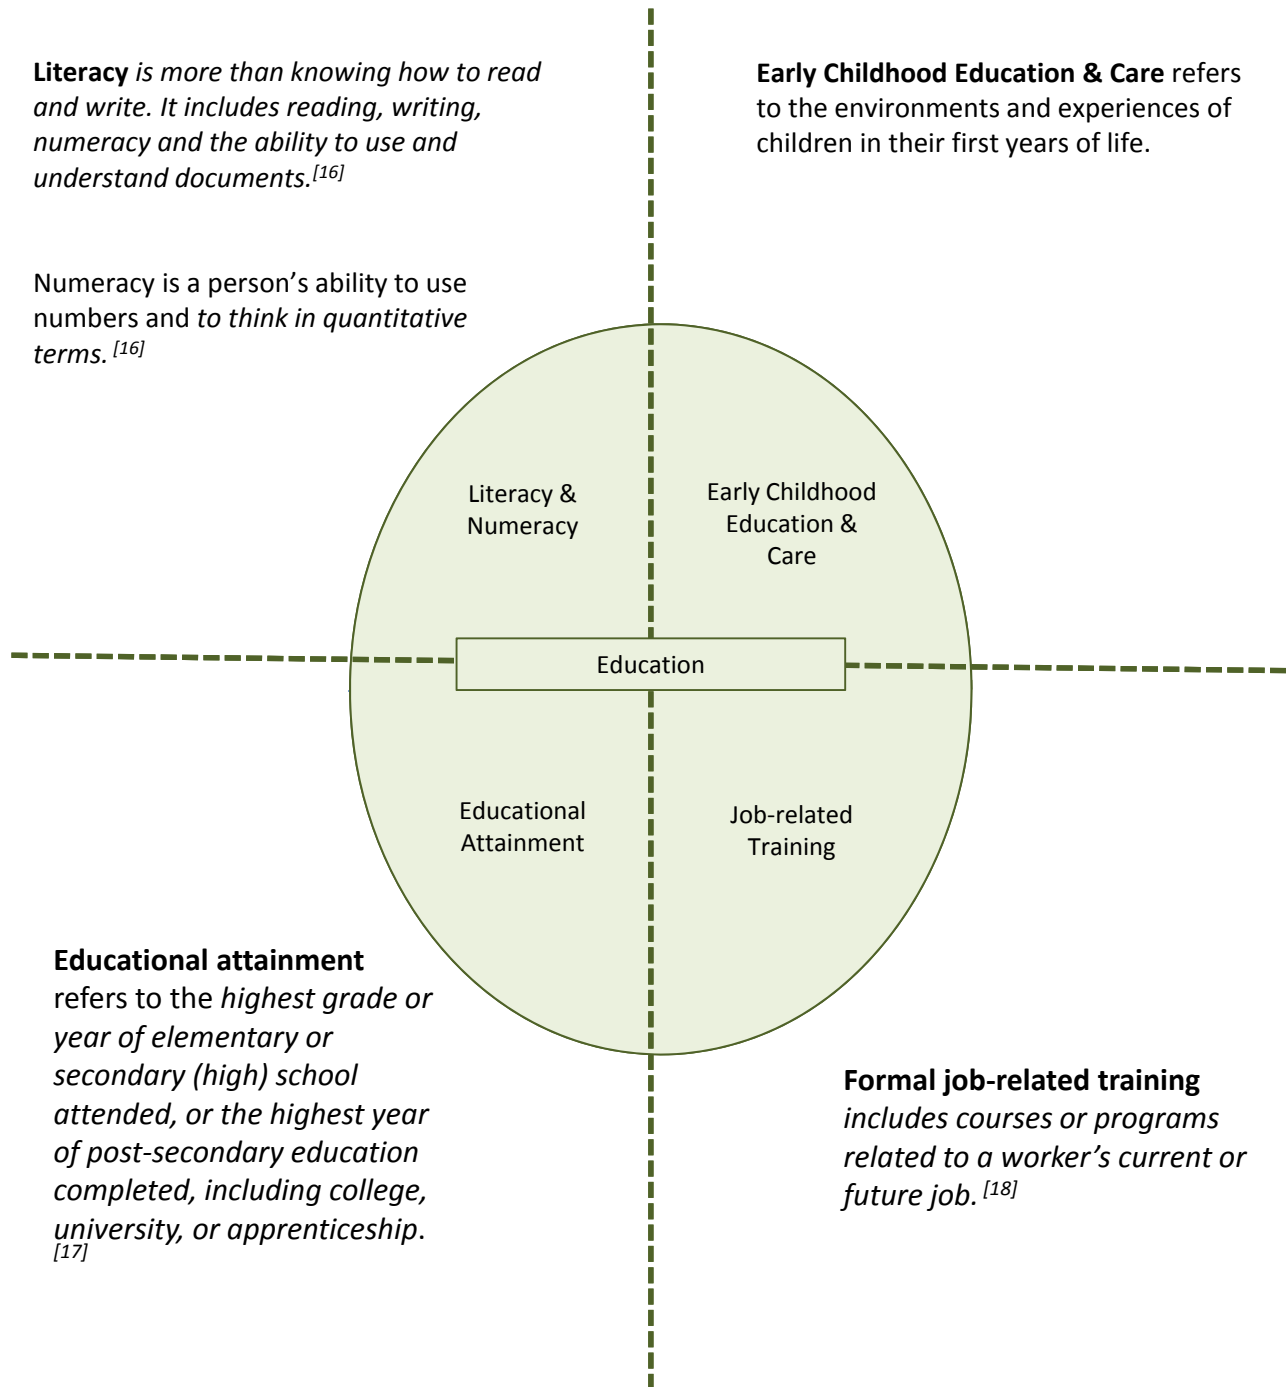

## Domain 3: Education

Education is defined as access to formal, informal and non-formal learning opportunities through environments, experiences and institutions that support the acquisition of knowledge, information and skills at all ages and in all contexts, including family and community settings, in study, work, leisure and creative endeavours.

**Literacy** is more than knowing how to read and write. It includes reading, writing, numeracy and the ability to use and understand documents.<sup>[16]</sup>

Numeracy is a person's ability to use numbers and to think in quantitative terms.<sup>[16]</sup>

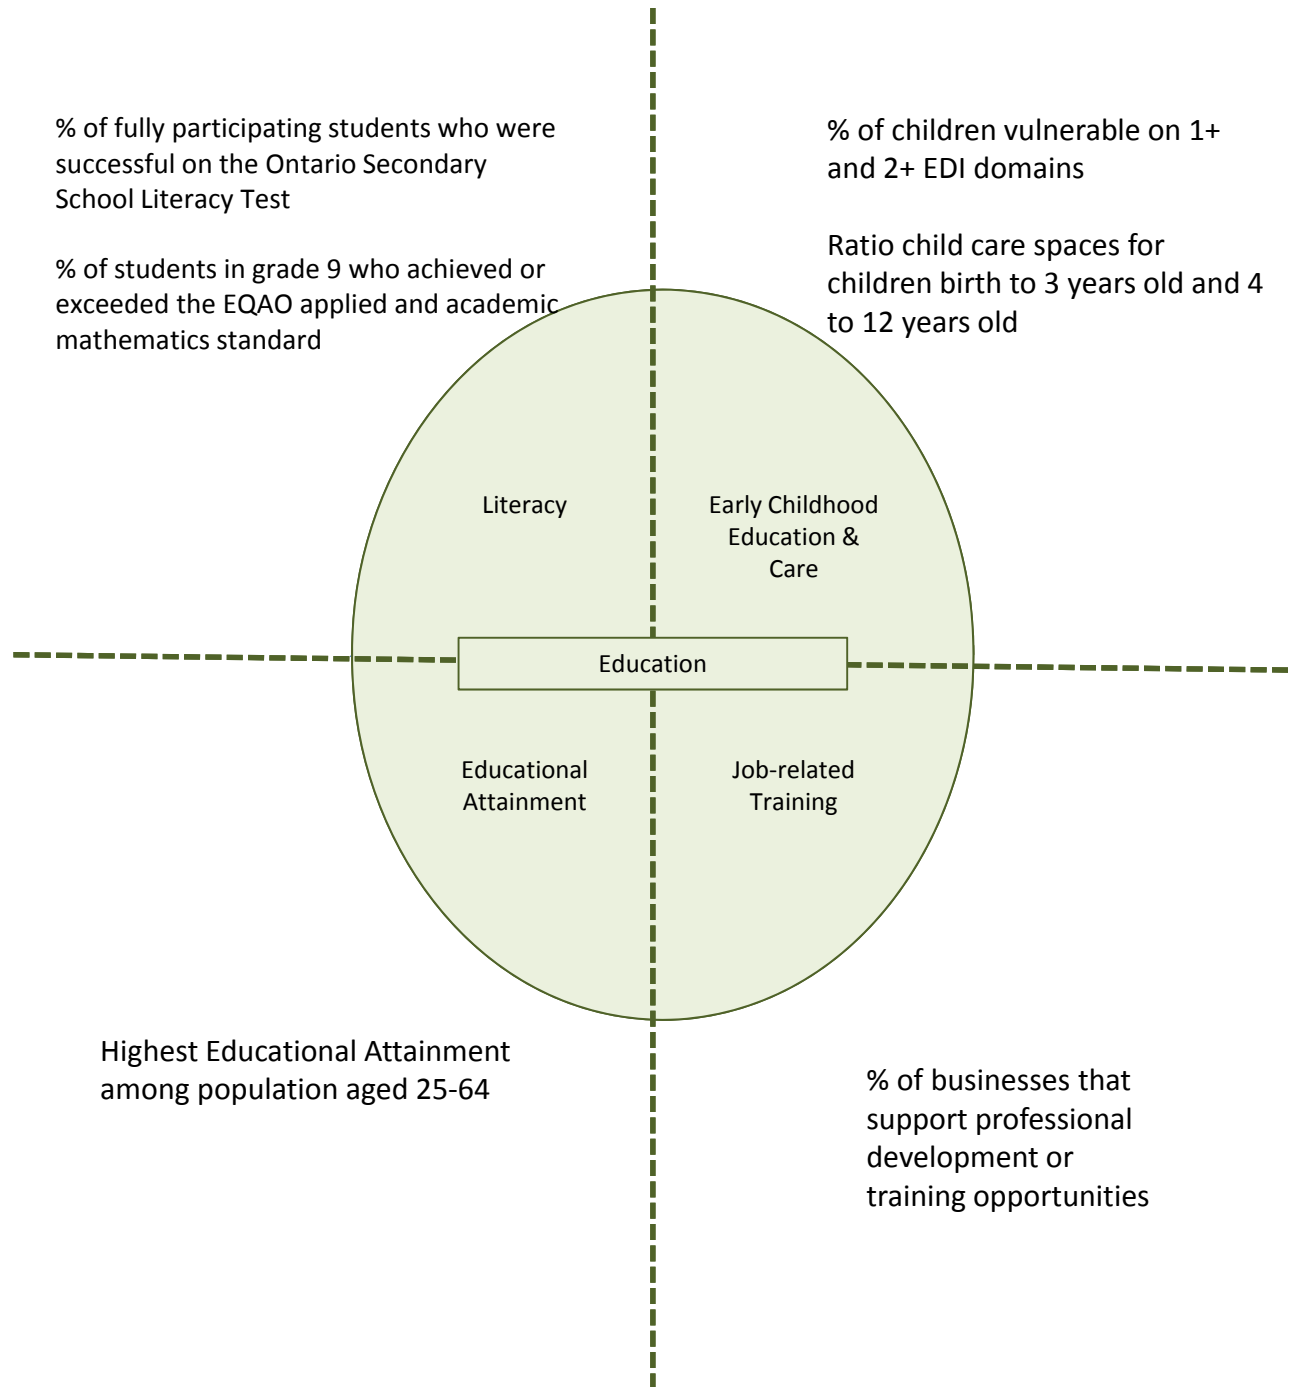

**Early Childhood Education & Care** refers to the environments and experiences of children in their first years of life.

**Educational attainment** refers to the *highest grade or year of elementary or secondary (high) school attended, or the highest year of post-secondary education completed, including college, university, or apprenticeship.*<sup>[17]</sup>

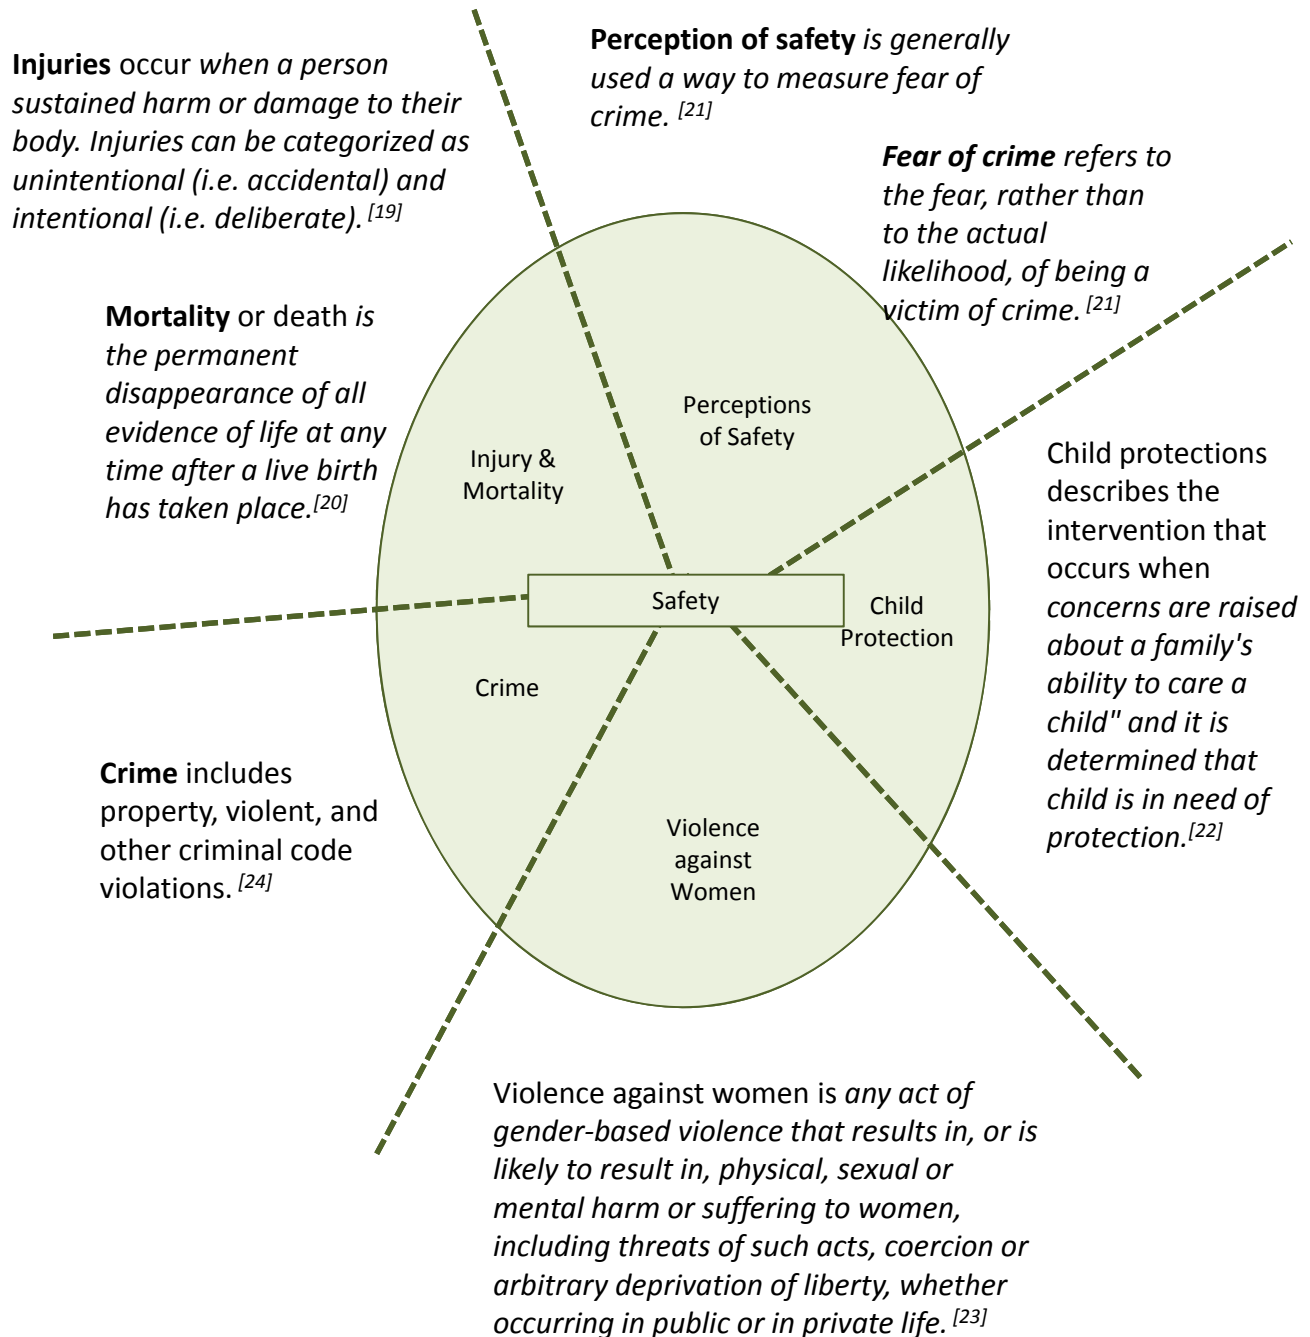

**Formal job-related training** includes courses or programs related to a worker's current or future job.<sup>[18]</sup>

## Education Population-level Indicators

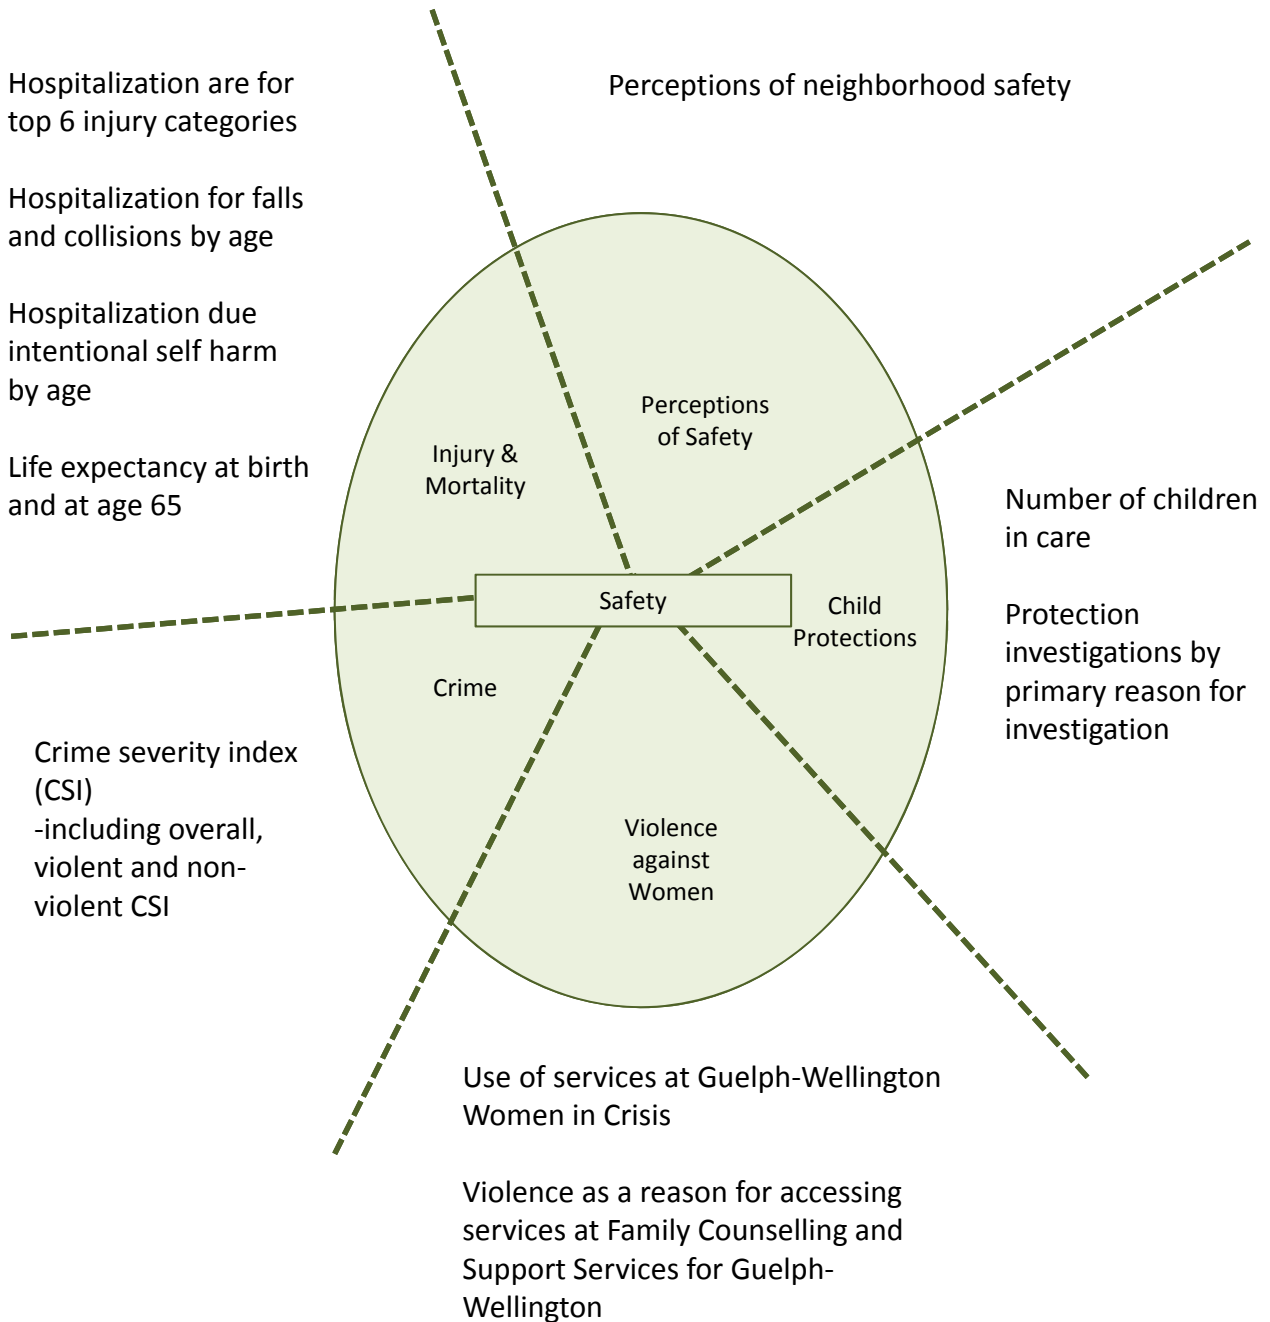

## Domain 4: Safety

**Safety** includes 5 aspects of physical and emotional safety.

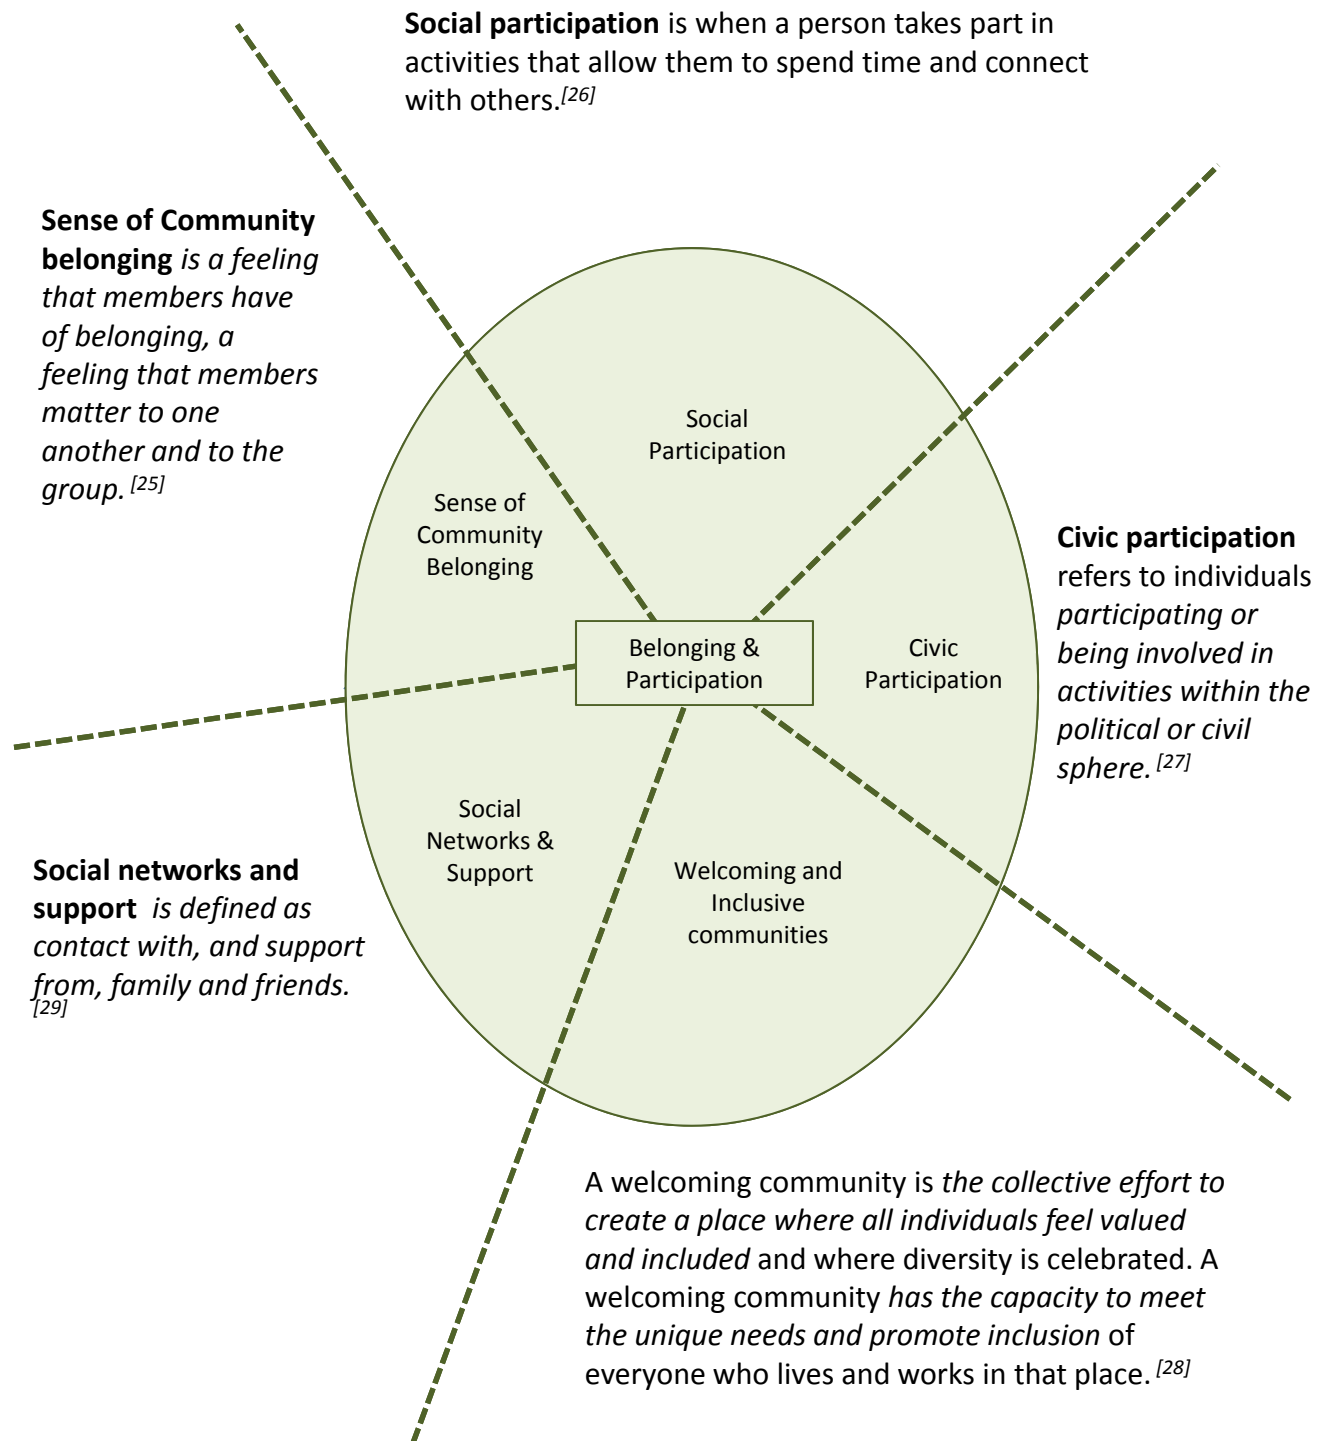

## Domain 4: Safety

Safety includes 5 aspects of physical and emotional safety.

## Domain 5: Belonging & Participation

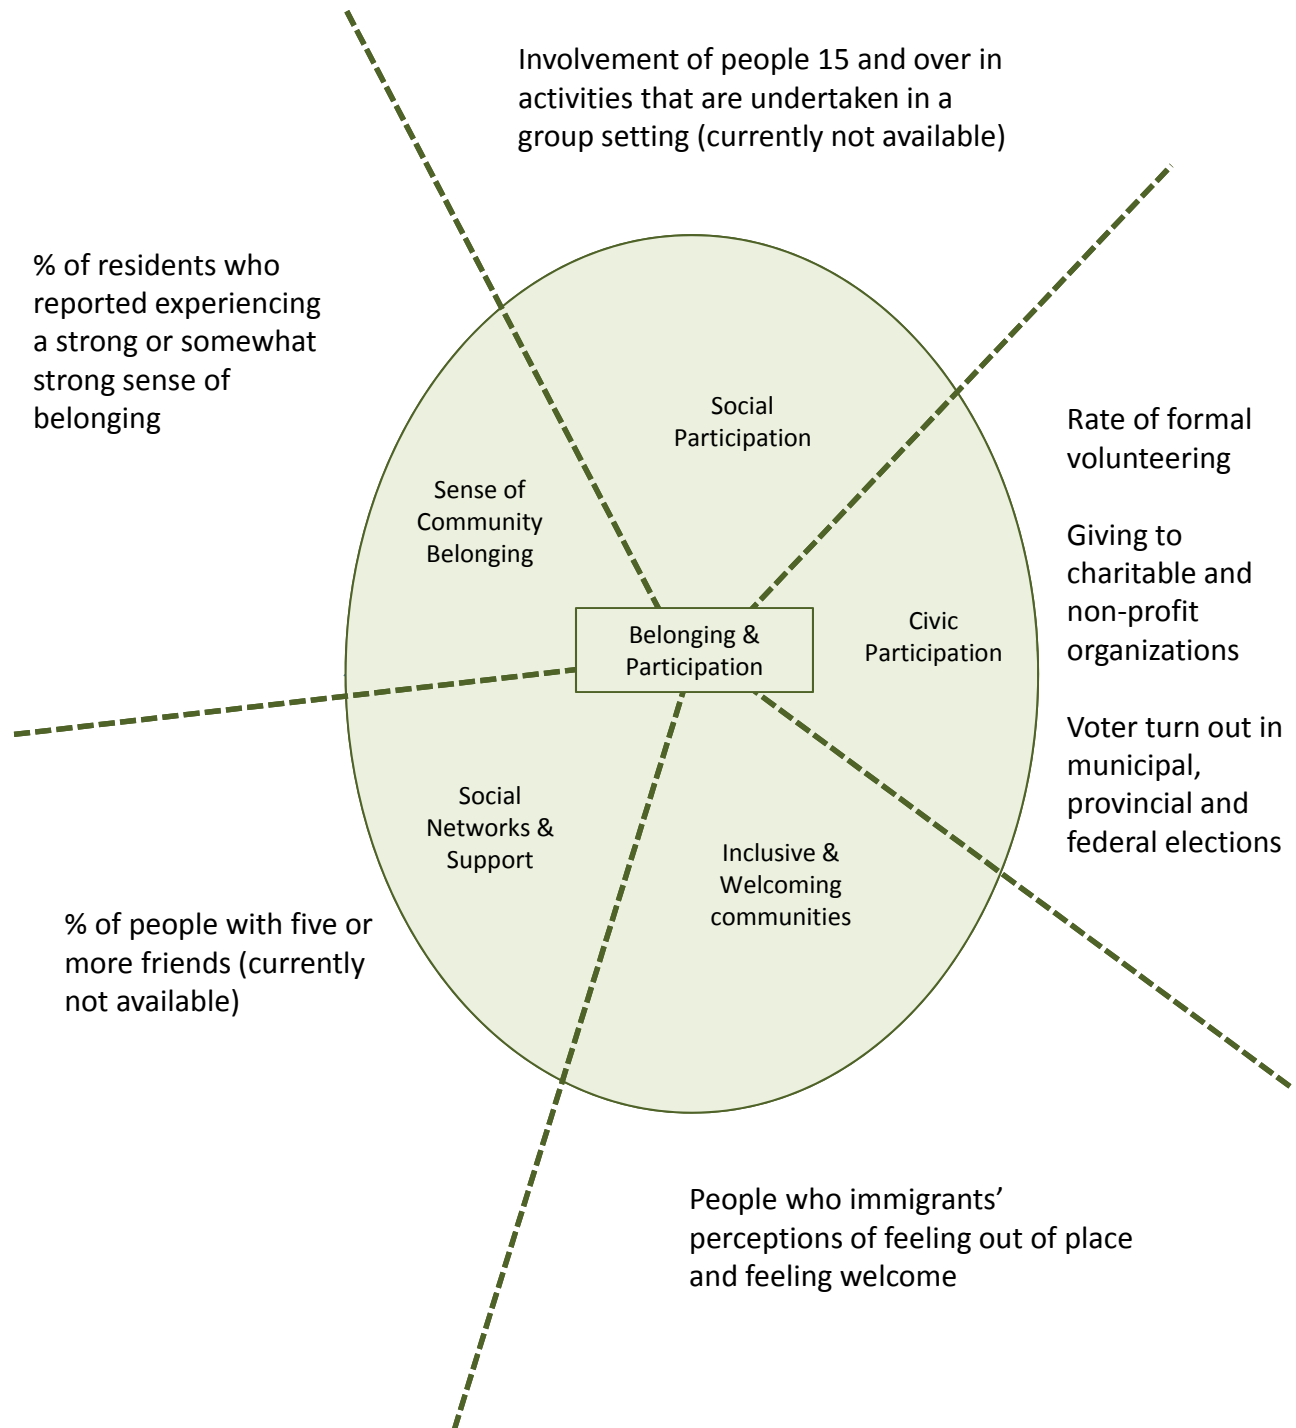

Belonging and participation includes 5 interrelated concepts that support and promote social wellness and reciprocity at both the individual and community level. The concepts in this domain are not mutually exclusive.

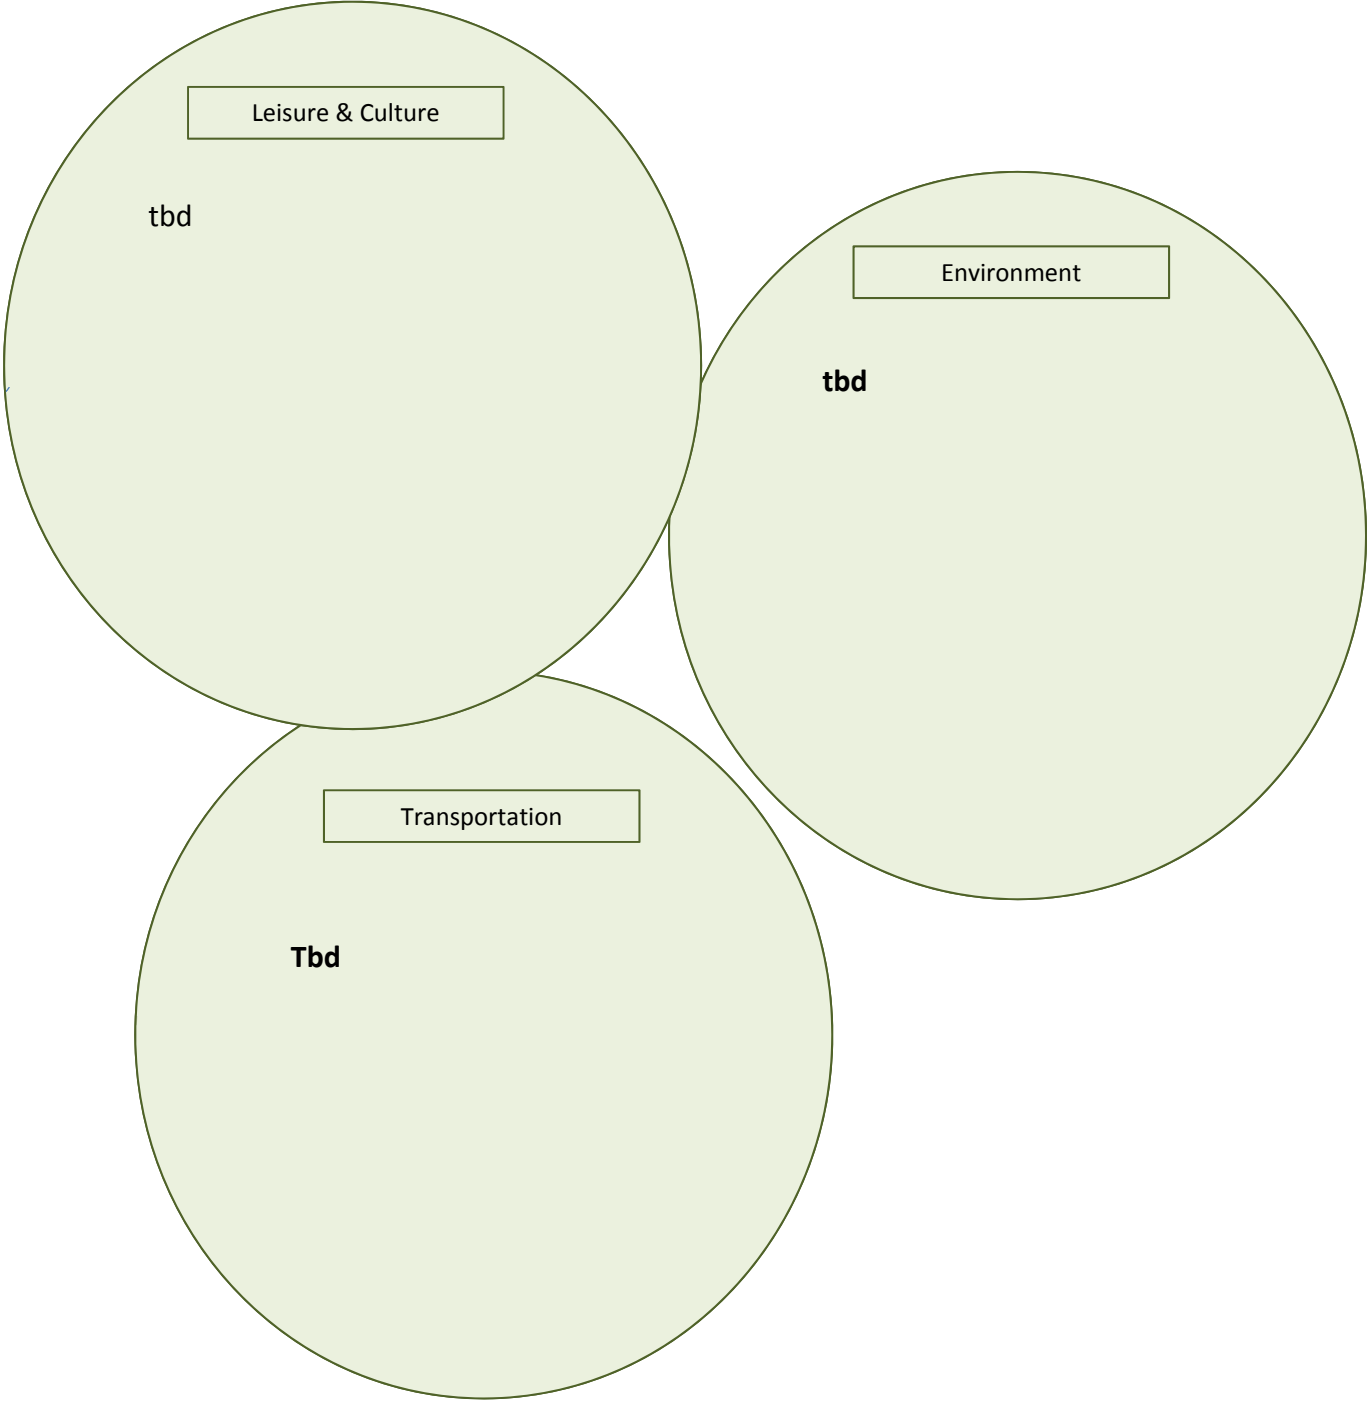

## Domain 5: Belonging & Participation

Belonging and participation includes 5 interrelated concepts that support and promote social wellness and reciprocity at both the individual and community level. The concepts in this domain are not mutually exclusive.

**Domain 6, 7 & 8 : Culture & Leisure; Transportation; and Environment**

The Leisure and Culture, Environment and Transportation are still under development.

## **Common Language and Understanding Phase II: Maintaining, updating, & deepening what we know**

The domains and concepts identified in *Phase I* provide us with the common language to broadly identify and understand the social and health strengths, gaps and needs in our community. The second phase of creating a common language and understanding is to maintain, update and deepen what we know.

### **Data Dashboard**

The development of a data dashboard is a critical first step to create the infrastructure to maintain and update what we know about social and health wellbeing in Guelph & Wellington. The domains, concepts and indicators identified in *phase I* will be used to organize and populate the dashboard.

### **Sub-Populations**

It is important and often critical to understand the needs or circumstances of distinct populations when gathering population-level data. Connecting the dots between and contextualizing the various aspects of wellbeing at a local level provides a more detailed and nuanced understanding of social and health wellbeing to support strategic and focused action in response to needs and gaps.

#### **What is required to move forward**

Stakeholders of social and health wellbeing (who will use the information to support service and system planning and resource allocation), academic literature and the priority populations that exist within the Community Data Program will inform the identification of sub-populations.

## Geographies

Toward Common Ground is an initiative that is operating in Guelph and Wellington County. Within the City of Guelph and the County of Wellington, there are sub-geographies that, similar to priority populations, will have a unique set of needs or circumstances.

### **What is required to move forward**

It is essential to make data and information available at lower levels of geography to inform strategic action. When lower level geographies are required to better understand a need, gap or strength, TCG will use the same geographies as those identified and used by the *Wellington Dufferin Guelph Reports Card on the Wellbeing of Children*.

## **Deeping & expanding our knowledge about domains & concepts**

The identification of domains and concepts, as well as the identification of indicators provides a bird's eye view of social and health wellbeing in Guelph and Wellington. Moving forward, more information will be needed about specific domains and concepts to deepen our understanding and local knowledge and to further inform strategic action.

### **What is required to move forward**

Data and research gaps and needs should be informed by stakeholders who use local data and information to guide planning and action. Research experts should use their technical knowledge about research methods and available data and information to conduct research that produces reliable and valid results. Research results should be communicated in an accessible manner and used to support and inform action taken in response to local social and health needs.

## **Maintaining a bird's eye view of who is doing what**

Alongside a more comprehensive understanding of our community's strengths gaps and needs comes a bird's eye view of who is doing what. In *Phase I*, information has been gathered about collaborative system-change initiatives (see appendix B & C for more context) to get a picture of the actions, outcomes and types of interventions that we are collectively working on to improve social and health wellbeing in our community.

### **What is required to move forward**

In *Phase II*, the information gathered in *Phase I* will be used to inform strategic action. Decisions must be made about whether more or other "who is doing what" information is needed.

## Wellbeing Framework Part 2: Understanding Interventions & Impact

The common language and understanding that is supported by this framework is critical to *create a bird's eye view* and *connect the dots* of local strengths, gaps and needs; it is also an important precursor to be able to *transfer and mobilize knowledge* in an accessible and effective way. The second part of the framework supports TCG's last two pathways: *build collective capacity* and *champion or support strategic action*. This part of the framework presents a lens to understand how and where stakeholders intervene to affect change and the corresponding impact they hope to see and measure.

This visual below is meant to support Toward Common Ground and its stakeholders to be deliberate about how, why and where they take strategic action and measure corresponding impact as they work together toward a collective vision for the community. The lens draws on the Social Determinants of Health, Ecological Systems Theory and Ekonomos' Capacity to Participate/Conditions for Participation; it is based on three assumptions:

- Stakeholders of social and health wellbeing are working together through different pathways to create the individual and collective conditions for participation and/or to enhance access to the social determinants of health
- Stakeholders of social and health wellbeing are working toward a collective vision, even though they may articulate their individual visions differently
- Contact with the human service system usually becomes more intense the closer people are to surviving and the farther away they are from thriving

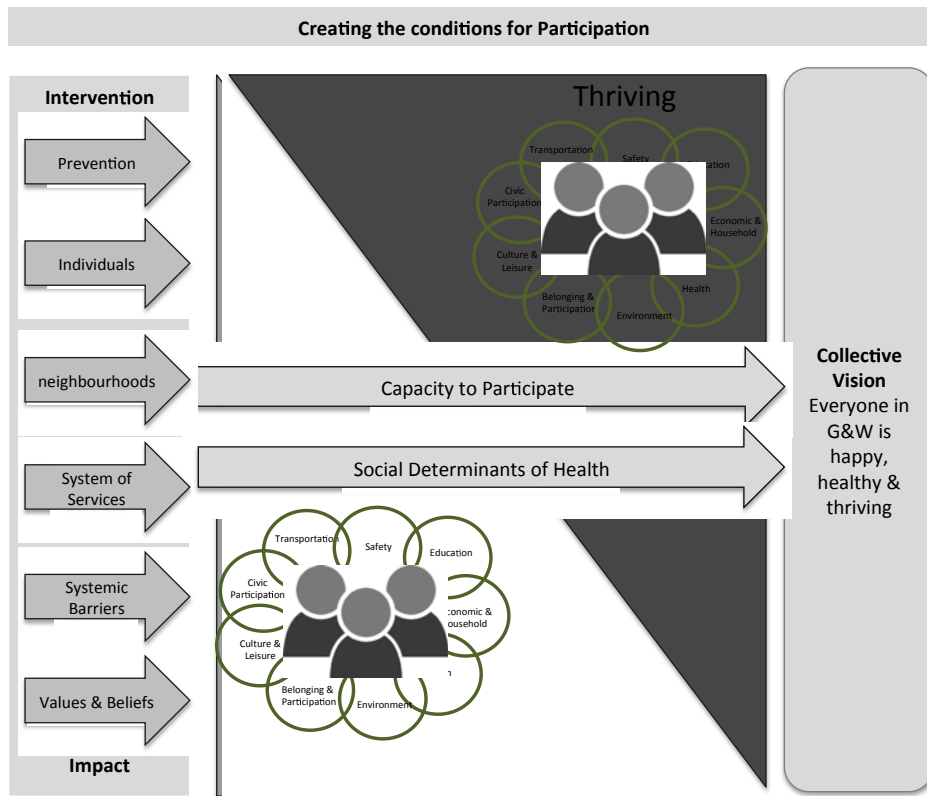

With these assumptions in mind, the degree to which people are surviving and thriving in our community is understood by tracking population-level indicators under nine domains, with a current focus on six. Regardless of where stakeholders intervene and which social issue or priority population they focus on, together we are creating the conditions for participation by supporting people's access to the social determinants of health and increasing their capacity to participate fully in their lives.

In general, Toward Common Ground supports **collective** initiatives or interventions that work on "systems". That is, TCG supports systemic change and/or the system of services that support social and health wellbeing in Guelph and Wellington. In some cases, there may be a focus on the community's overarching value and beliefs. In all cases,

meaningful change at any level should lead to meaningful impact in the lives of people who live in our community.

Alongside local data and information, this lens is used as a tool to map and deepen our understanding of collaborative system-change initiatives in Guelph and Wellington to inform how and where we intervene to take collective strategic action.

TCG Lens to understand & map needs, strengths, interventions & impact

This visual draws on the following sources: Ecological Systems Theory; Ekonomos' Conditions for Participation and Capacity to Participate based on the Sustainable Livelihoods Framework; Social Determinants of Health

## Wellbeing Framework Part 3: Implementation

### ***Bird's Eye View, Connect the Dots and Transfer & Mobilize Knowledge***

The information that is organized and understood through this framework needs to be current and reliable. This will require a commitment to update data and information, as it becomes available and to fill data gaps when they are identified. The information must also be shared through accessible and ongoing communication.

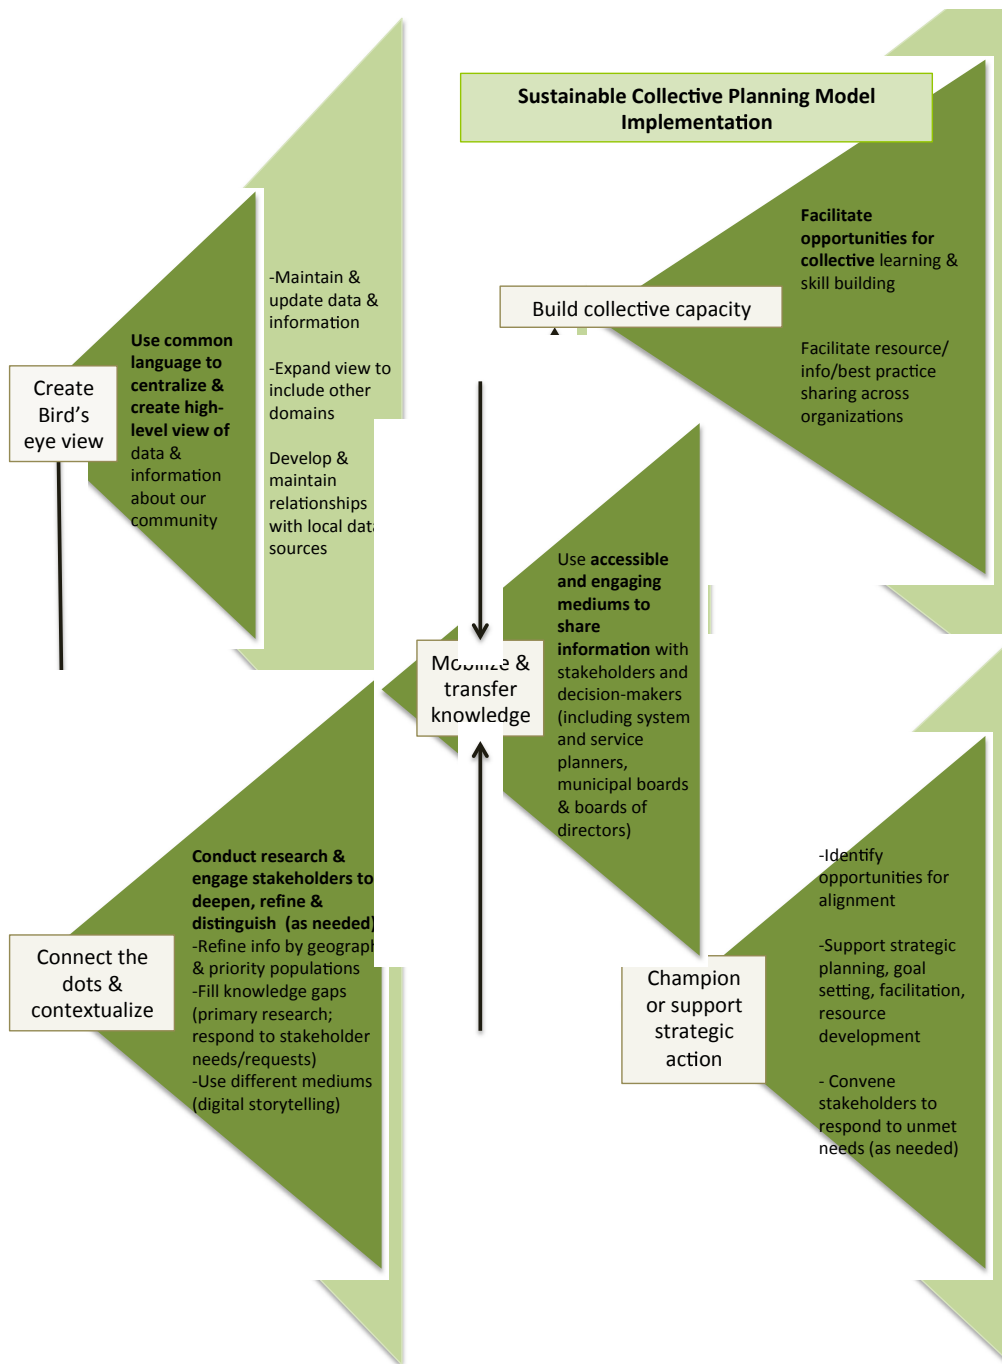

### ***Build Collective Capacity and Champion & Support Strategic Action***

What matters most is what is done with the data and information that is gathered. Toward Common Ground partners are tasked with deciding which strategic actions are feasible and will make the most difference in the lives of people who live in Guelph & Wellington County.

TCG has identified *build collective capacity* and *champion and support strategic action* as two critical pathways. A commitment to *build collective capacity* seizes the opportunities for social and health service providers and organizations to collectively build or leverage existing skills, knowledge and expertise.

*Champion and support strategic action* is a commitment to seize opportunities to work together to be more effective and efficient in our efforts to affect meaningful change. This is where the most important decisions need to be made. Below is a visual that presents the connections between each pathway as well as the types of actions that TCG will take on moving forward.

## Conclusion

The Toward Common Ground model has been created with a long-term vision that requires a commitment to implement its five pathways in an ongoing and iterative manner. Creating a bird's eye view of strengths, gaps and needs is only as useful as that information is current and reliable and more importantly used to inform strategic action that makes a meaningful difference in the lives of people who live in Guelph and Wellington.

Practically, this means maintaining and updating the data dashboard and deepening what we know by priority populations, geographies and within specific domains and concepts. Resources will be needed to support ongoing gathering, analysis and interpretation of quantitative and qualitative data and information about wellbeing in Guelph & Wellington.

For all of this to be useful, a renewed commitment to evidence-based planning and action is needed, alongside a commitment to the possibility of working together differently and to making decisions about programs, services and resources that reflect a collective community vision for everyone in Guelph and Wellington to be happy, healthy and thriving.

## Appendix A: Definitions

**NOTE: Add \* to terms included in document and defined here.**

Term	Definition
Change effort	Refers to any individual, organization, group of organizations or collaborative initiative that is taking action with the goal to affect meaningful change that will make a difference in the lives of people who live in Guelph and Wellington.
Collaboration	Collaboration usually involves the following: <ul style="list-style-type: none"> <li>• a shared, collectively-defined vision and responsibility for achieving outcomes</li> <li>• equal distribution of leadership among members who maintain their own identities</li> <li>• organizational independence outside of the collaboration.</li> </ul>
Community Wellbeing	The presence of the highest possible quality of life in its full breadth of expression focused on but not necessarily exclusive to: economic and material wellbeing, robust health, a sustainable environment, an educated populace, a sense of belonging, a safe home and community, high levels of democratic participation, and access to and participation in leisure and culture.  Adapted from Canadian Index of Wellbeing <sup>iii</sup>
Concepts	Specific aspects of quality of life under each domain area
Conceptual Framework	Language and concepts through which to support a shared understanding of wellbeing.
Content Experts	Local representatives identified as experts on specific issue or topic areas due to their knowledge and/or experience with areas.
Domains	Quality of Life Categories <sup>iv</sup>
Strategic Language	Language used to describe direction, priorities and focus of an initiative.
Structural Language	Language used to describe the committees, action and working groups of an initiative
System-level work or change	Actions that aim to affect or change two systems: <ol style="list-style-type: none"> <li>1. <b>Government or policy system:</b> This system can underpin or impact any one or group of wellbeing concepts</li> <li>2. <b>System of local service and supports:</b> This is the system of services that supports social and health wellbeing with a focus on one or a group of wellbeing concepts or one or a group of priority populations. In general, collaborations work to affect change in one of three aspects of the service system:               <ol style="list-style-type: none"> <li>a. Fill a gap</li> </ol> </li> </ol>

- 
- b. Improve access
  - c. Determine or improve effectiveness

## Appendix B: Collaborative Systems Change Efforts

Often local collaborative initiatives identify that they are working on systems-level change. To ensure stakeholders are using common language and that we are clear about where we are intervening and where we are measuring impact, further distinctions are important. In the first year of the Toward Common Ground project, it became clear that when project partners talk about “system-level” work or systems change\*, they were usually referring work that aims to affect change on two systems:

1. **Government or policy system:** This system can underpin or impact any one of the wellbeing domains or concepts.
2. **System of local service and supports:** This is the system of services that supports social and health wellbeing with a focus on one or a group of wellbeing concepts or one or a group of priority populations. In general, collaborations work to affect change in one of three aspects of the service system:
  - a. Fill a gap: When there is not a program to support people with X need, stakeholders work collectively to fill this gap
  - b. Improve access: The services people need are available, but they are barriers to access such as lack of transportation or knowledge of service, complex intake process etc. Stakeholders create and implement a plan to address the issue.
  - c. Determine or improve effectiveness: Stakeholders work together to understand the effectiveness or impact of a given service or system of services.

System-level impacts are also sometimes talked about through a collective impact lens, that is:

3. **A number of individual services and programs are consolidated into one group that becomes its own system or microsystem:** This is when the impacts of a number of individual services or programs (often, as shown through program measures or indicators) are rolled up or lumped under one umbrella so that together they become a *system* of services. Impact in the *system* is understood not by looking at the individual services but by looking at all the services as a whole.

Pathways to system-change can include shifting behaviour, values or beliefs.

## Defining “Change Efforts”

In the context of Toward Common Ground, change effort refers to any individual, organization, institution or collaborative initiative that is taking action with the goal to affect meaningful change that will make a difference in the lives of people who live in Guelph and Wellington.

### *Collaborative Change Efforts*

Change efforts are considered “collaborative” when a group of people comes together to make change.

Collaboration\* usually involves the following:

- a shared, collectively-defined vision and responsibility for achieving outcomes
- equal distribution of leadership among members who maintain their own identities
- organizational independence outside of the collaboration.

In Guelph and Wellington, there are a number of collaborations that would be considered *comprehensive community initiatives* (or CCIs). CCIs work:

- comprehensively across geographical, social, and economic areas
- across individual and systemic levels to build community and to address complex community issues<sup>v</sup>.

CCI are also sometimes referred to as multi-sectoral collaborative efforts.
